

# RESEARCH PARTICIPANTS NEEDED

- Study:** Clinical Research Study to Evaluate the Effect of Colgate Mouthwashes on Oral Microbiome in Oral Tissue Samples
- Who:** Male and female *non-smokers* between the ages of 18-45 in good health.
- Procedures:** Subjects must consent to filling out a medical history, having an oral exam, and participating in procedures to study tissue healing. Small cuts will be placed on the roof of the mouth under local anesthesia. Subjects will be required to use a specific mouthwash during the period of the study. Healing will be assessed by photos.
- Reimbursement:** Subjects will be paid for their time.

## Please note:

- This study is divided into two sections a month apart.
- Each section requires reporting to the dental clinic several days of a week (usually these visits are brief).
- The total time required for this study is about 6 weeks.
